

OUR TEAM

The Coom Green Energy Park project team has extensive experience in the design, construction and operation of wind energy projects, including experience of key issues which may concern communities such as noise, visuals, shadow-flicker, traffic, ecology and water quality.

We are committed to mobilising our experience to ensure we meet our stated aim of creating projects which are good for Ireland, good for the local communities and good for the environment.

Our team is working with the local community to ensure that information is available and that queries are recognised and responded to in a transparent and efficient manner. We are committed to involving local people in the project and being honest and open in how we design the project. We are also committed to ensuring that local communities share in the economic opportunity that this project would bring.

Tom O'Donnell is our Project Manager. Tom has over 12 years' experience in the environmental sector in Ireland, the UK and New Zealand; including major energy projects. Tom has experience of working on all aspects of wind energy projects, from feasibility to construction and operation.

Pat Roche is our Community Engagement Officer. Pat has worked in the forestry sector for over 40 years and comes with a wealth of forestry experience and a deep understanding of both the local community and the needs of the local area.

Kieran O'Malley is our Development Manager. Kieran has over 23 years' experience in engineering and renewable energy project development. Kieran has experience preparing planning applications and environmental impact assessments for numerous wind energy development projects around Ireland.

CONTACT US

We welcome all engagement and interaction with you on any aspect of what we are proposing to do. You can also contact us by:

WHAT IS THE COOM GREEN ENERGY PARK?

Brookfield Renewable Ireland and Coillte are jointly exploring the potential for a renewable energy project near the Bottlehill and Glannasack areas in County Cork. This project is exploring the use of wind turbines, solar panels and energy storage technology.

The proposed project is currently at the design stage. The results of detailed environmental impact assessments and feedback from the local community and other stakeholders will inform the design of the project. We are hoping to be in a position to apply for planning permission in August 2019.

OUR FOCUS

We seek to be good neighbours in the communities in which we develop projects and operate. Our commitment is to engage with our stakeholders in decisions that concern them.

We will consult and involve people at every stage of the process. We value your feedback and invite you to engage with our team. Our aim is to build a project that brings tangible and long-lasting benefits to the local community and contributes to the vital task of decarbonising our country.

Our project team have been engaging in door-to-door community consultation in the areas closest to the project and this will continue throughout the pre-planning process. Meetings have also taken place with relevant local community groups in the area. Open evenings will be held to discuss the key aspects of the project. Please see the website for details.

ENVIRONMENTAL ASSESSMENT

In order to assess the suitability of the area for a renewable energy project, the Coillte and Brookfield Renewable team will continue to carry out a number of assessments in the coming months. We have drawn up a preliminary scope for these assessments and we will be consulting locally on this to make sure it covers all relevant areas of interest. This information will also be available on our website www.coomgreenenergy.com
