

10/02/2023

Dear Neighbor,

Construction of the Revolution Wind project (the Project) has begun in your area, located in the Town of North Kingstown. The Project is being constructed by Eversource & Ørsted and its contractors and subcontractors. Crews have begun the first phase of onshore construction for the Project. The route is roughly one mile-long and is within the Quonset Business Park. The Project will build a new substation which will interconnect to the existing Davisville substation.

In the coming weeks, crews will begin working on the underground duct-bank on Burlingham Avenue and Circuit Drive. If work is delayed, an updated notice will be provided to neighbors regarding the new schedule.

What You Can Expect

- Location of Work:
 - Construction activity will take place on Burlingham Avenue and Circuit Drive.
- Traffic Management:
 - We coordinated and will continue to coordinate closely with town officials to maintain a safe and effective flow of traffic around Project work areas and to provide emergency access if needed.
- Work Hours:
 - Crews are anticipated to begin excavating for the duct-bank starting Tuesday, October 10th. Work hours will be 7:00 a.m. to 6:00 p.m.
- Construction Activities:
 1. Crews will be mobilizing equipment and setting up temporary work zones on Burlingham Avenue and Circuit Drive.
 2. Trenches will be dug using an excavator and dump-truck.
 3. Conduit piping will be delivered and then installed into the trenches as they are dug
 4. Once conduit piping has been installed, crews will backfill the trenches and restore the disrupted area. At the end of each workday, steel plates will be used to cover exposed trenches.
 5. Equipment will include dump-trucks, excavators, jackhammers, and concrete saws
 6. When possible, crews will look to expedite this process and minimize any disruption as much as possible
